

Week 5 Reflection

Classrooms are the museums of learning.

This is the thought I had during our talk this week on curation. As teachers we are responsible for curating high-quality educational content for our students and our peers. After this week, I will be sure to not be a scrooge or a tabloid!

Now, reflecting on my new technology this week, I am not sure if I have found Obsidian all that useful, to be honest. I can see the graph function being useful in certain contexts, but I am not sure it is something that I will use all that often. (However, I am typing my reflection in it this week, and I noticed that when I typed an open bracket, it automatically added a closed bracket for me -- cool!). Also, I noticed that whenever I use Obsidian, it overheats my laptop -- concerning! I do like how crisp the typing looks, I'm not sure it's enough to overrule my deep attachment to the Google ecosystem.

This week, I also found it interesting when we talked about never being able to get off email lists. Last term, I had to subscribe to the Rick Hansen foundation website for an assignment. I have tried unsubscribing from this man's newsletter no fewer than six times, and I am still receiving regular emails. It is madness! If anyone has any ideas for how to get off his list, please let me know!

Credit to [Mareike](#) for the great idea of typing this reflection out on a tech tool and [Silver](#) for proofreading!

Have a great week everyone, especially my loyal readers!

Markus Meyer
